

BARNSTORM

Descaling Detergent

Formulated for cleaning and descaling hog confinement buildings, equipment, and vehicles

BARNSTORM is a heavy duty concentrated cleaner and descaler, combining a unique blend of specially formulated acids and high-foaming detergency designed to remove both organic and inorganic soils from surfaces prior to disinfection. At recommended dilutions of 1-2 ozs. per gallon, BARNSTORM is non-corrosive to building materials, non-irritating to personnel and animals, and will not peel paint or rust truck bodies.

BARNSTORM is ideally suited for use in all phases of hog farm sanitation, including; nurseries, farrowing crates, breeding and gestation rooms, loading chutes, animal transport vehicles, foot-baths, waterers and feeders, and all areas on the pork production facility where effective disease control and bio-security are critical to animal health and performance.

All disinfectants perform better on a cleaner surface. So the question becomes; what type of detergent do you use?

The oxidizing effect of acid-based compounds is best for breaking down fecal matter, uric acid stains, and biofilms. However, harsh acids like muriatic, while very effective, are too dangerous for personnel and very corrosive to equipment.

BARNSTORM'S use of feed-grade organic acids provides the oxidizing and descaling abilities necessary to break down organic soils, while remaining non-corrosive to equipment and non-irritating to animals and personnel.

BARNSTORM's unique formulation helps break-down and loosen packed on fecal material, uric acid, and biofilms, creating a cleaner environment for disinfecting and greatly reducing wash down time. In addition, the intrinsic germicidal ability of organic acids allows BARNSTORM to begin lowering bacteria levels *before the disinfecting process even begins!*

It may be applied through high or low pressure spray apparatus, immersion tank, with mop or sponge, or through sprinkler systems. BARNSTORM rinses freely from all surfaces, and leaves no chemical residues.

Directions For Use:

1. Remove all gross soils from room using high pressure or high volume spray equipment.
2. Apply BARNSTORM to all surfaces using low pressure sprayer. Allow product to remain in contact with surfaces for a minimum of 15-20 minutes.
3. Using high pressure washer, remove remaining soils from room.
4. Room is now ready for disinfecting.
